

HPL - finish options

High Pressure Laminate faces for timber acoustic panels

Scratch and impact-resistant. Timber effect or solid colours.

High Pressure Laminates overview

Made with several layers of paper and resins pressed together under high pressure, the resulting sheet is of high quality and with excellent durability. Combining this technology with acoustic panels produces excellent solutions.

Timber effect

As well as the standard finishes overleaf, many more options are available. These are high quality finishes with complimentary texture.

Colours

A wide range of colours are available. Talk to us if you have specific NCS, RAL or Pantone requirements.

Textures

Each of the timber effect finishes has a pre-selected texture to best suit the character of the species it represents. Solid colours are usually a satin finish and on special request, Ultra Matt finishes are available as mentioned below.

New: Ultra Matt, anti-fingerprint HPL

A dramatic and contemporary look. Highly resistant to scratches and fingerprints, unlike other matt surfaces.

New: Printed HPL

Enables uniquely multifunctional solutions like sound absorbing cupboard doors with imagery, branding or signage; still maintaining the abrasion resistance of normal HPL.

HPL timber - typical finishes

These are the standard HPL (high pressure laminate) options which are usually in stock for shorter lead times. Many more are available and we can try to match finishes. The standard thickness is 0.9mm and these are highly scratch resistant, UV resistant, and low maintenance finishes.
